

## Editorial to the sixth issue of the International Journal of Geoscience, Engineering and Technology

We present the sixth edition of the International Journal of Geosciences, Engineering and Technology.

The International Journal of Geosciences, Engineering and Technology is an interdisciplinary journal of the postgraduate Program in Technology, Environment and Society of the Federal University of Vales do Jequitinhonha and Mucuri (PPGTAS/UFVJM).

The search for knowledge requires, in many cases, exhaustive research, using documental and human sources. It is extremely important to use documental and human sources, using different working methods and statistical mediation scales to assess the results achieved. Without adequate research, we will not have innovation.

The research comprises a series of techniques that are of great value to all areas of study. It is extremely important to publish scientific research carried out in the most diverse research environments, in order to collaborate with the advances of science and the society.

It will be through scientific research that societies will achieve development in the future.
