

Editorial to the first issue of International Journal of Geoscience, Engineering and Technology

We present the first edition of the *International Journal of Geoscience, Engineering and Technology* with the intention of providing recent advances in a multidisciplinary perspective.

Scientific research has always been the source of development trends. Thus, the mission of this Journal is to be a showcase of initiatives and ideas, with an effort focused on structuring and consolidating scientific thinking in the areas of Geoscience, Engineering and Technology, being strategically concerned with anticipating situations for the construction of solutions in benefit of science, education and development.

The International Journal of Geoscience, Engineering and Technology is an interdisciplinary journal of the Postgraduate Program of Technology, Environment and Society of the Federal University of Jequitinhonha and Mucuri Valleys (PPGTAS / UFVJM).

Education and research are the basis of knowledge for the next generations of specialists. Although the academic world is increasingly driven by interdisciplinary views and models, the importance of intra-disciplinary views cannot be underestimated. In this sense, the vision of knowledge must be based on partnership, balance and consensus. Thus, we sow the hope of disseminating research in a democratic and modern perspective.
