

Editorial to the fifth issue of the International Journal of Geoscience, Engineering and Technology

Greetings.

We present the fifth edition of the International Journal of Geosciences, Engineering and Technology.

It is extremely important to publish scientific research carried out in the most diverse research environments, in order to collaborate with the advances of science and the society.

A research comprises a number of techniques that are of great value to all areas of study. Accessing information requires in many cases, exhaustive research, using documental and human sources, using different methods of capture and scales of statistical mediation to assess the results achieved.

The International Journal of Geosciences, Engineering and Technology is an interdisciplinary journal of the postgraduate Program in Technology, Environment and Society of the Federal University of Vales do Jequitinhonha and Mucuri (PPGTAS/UFVJM).

Only with scientific research will societies achieve future development. Without adequate research, we will not have innovation.
